

Nanotechnology Seminar Series

The Nanotechnology Seminar Series is intended to bring together faculty members, students, and guests for exchanging ideas and research experience in the multidisciplinary field of nanotechnology.

Nanotechnology is a very broad area inspired by the desire to create new routes and formulate new concepts for doing technology and for addressing practical problems. The group at LHUP gathered around these ideas - Dr. Michael Cullin, Dr. Anura Goonewardene, Dr. Carina Howell, Dr. James Howell, Dr. Dongdong Jia, Dr. Marian Tzolov, Dr. Amy Way, and Dr. Jacqueline Whitling – wants to have an open forum for presentations and discussions which will facilitate the interactions within the group and with other colleagues. We are open for all faculties willing to join, either the group or just the seminar.

The seminar will be also a wonderful opportunity for our nanotech students to present their research results, to gain presentations skills, or just to complain how frustrating it can be at times to do research.

The presentations in the seminar will be from members of the group, students in nanotech and invited speakers. The coordinator of the seminar, Dr. Marian Tzolov (mtzolov@lhup.edu), accepts all related inquiries.

Time: 12-12.50 p.m. with 30 min. for presentation and 20 min. for discussion.

Place: Ulmer Hall, room 219

Next event: Nov. 7th

Presentation: “Photonic devices based on colloidal nanocrystal quantum dots” by Dr. Jian Xu, Dept. of Engineering Science and Mechanics at Penn State University.

All faculty members and interested students are kindly invited.
